# AAFAQUE NAZIR

Full-Stack Developer

aafaquenazir@gmail.com | +91 9325629256 | Navi Mumbai, India | Portfolio | GitHub | LinkedIn

## PROFESSIONAL SUMMARY

Self-taught Full-Stack Developer skilled in JavaScript/TypeScript, React, Next.js, Node.js, and PostgreSQL (Supabase). Independently designed, built, and tested three production-grade web applications, including a multi-tenant SaaS platform, a real-time restaurant ordering system, and an e-commerce storefront. Focused on database security, query optimization, and scalable, maintainable architecture.

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL

**Frontend:** React.js, Next.js, Tailwind CSS, ShadCN UI, Redux Toolkit, Framer Motion

**Backend & Database:** Node.js, Express.js, PostgreSQL, Supabase (RLS, Auth), MongoDB, Redis, REST APIs, NextAuth.js

**DevOps & Tools:** Docker, Git, GitHub, Vercel, Netlify, VS Code, Antigravity

**Core Competencies:** Row-Level Security (RLS) & RBAC, Payment Gateway Integration (Cashfree/Stripe), SEO Optimization, State Management, Agentic AI Workflows

## PROJECTS

**Inventory Management SaaS** | *Next.js, Supabase (PostgreSQL, RLS), Node.js* | Live Demo

- Architected a multi-tenant SaaS platform using Supabase Row-Level Security (RLS), enforcing tenant data isolation at the database layer instead of the application layer.
- Replaced middleware-based access checks with database-level security policies, cutting backend authorization code by ~35% while removing cross-tenant leakage risk.
- Load-tested the RLS architecture across 25+ simulated tenant organizations under concurrent access, confirming zero cross-tenant data leakage.

**Restaurant Management System (QR Ordering + Live KDS)** | *Next.js, PostgreSQL, WebSockets* | Live Demo

- Built a QR-code ordering system with a real-time Kitchen Display System (KDS), engineered to handle 50+ concurrent orders per shift with sub-200ms data retrieval via optimized raw SQL.
- Re-engineered query execution plans to resolve peak-load latency bottlenecks, improving transaction throughput by 30% under peak-load conditions (avg. query time: ~800ms to under 250ms).
- Benchmarked a 500-order/shift workflow against the order-to-kitchen pipeline, targeting a 25% reduction in order-to-table time.

**E-Commerce Platform** | *Next.js (SSR), Cashfree Payment API* | Live Demo

- Engineered a server-rendered storefront with image optimization and code-splitting, achieving 95+ Lighthouse SEO scores and sub-2-second page loads.
- Integrated the Cashfree payment gateway with real-time order-status tracking and error handling for failed/pending transactions, confirmed across 8+ payment scenarios (success, failure, timeout, refund).
- Implemented cursor-based pagination and lazy loading for the product catalogue, cutting initial page payload by over 40%.

## EXPERIENCE

**Software Development Externship (Simulation) — Datacom, via Forage** | *Jan 2026*

- Performed root-cause analysis on 15+ system bugs across 4 modules, reducing recurring defect patterns by 20% within the simulation environment.

## CERTIFICATIONS

- React & Next.js with AI-Powered Projects — Udemy
- Generative AI — Google
- Web Development — CodeWithHarry

## EDUCATION

**Bachelor of Science, Information Technology** | University of Mumbai | 2021 – 2024
